

- 21,200 square foot school campus
- Age 3 – 6th grade
- 15 classrooms
- Administration
- Library

# Building Outside the Box

- 2004 addition:
  - 6,600 square feet
  - 4 classrooms
  - Office
  - Computer lab
- 2007 addition:
  - Science lab

## Benchmark Pre-school and Elementary School

4120 East Acoma Drive, Phoenix, Arizona

This school, which opened in 2002, has become one of the best charter schools in the state. Its success was immediate, requiring an addition in 2004 with another addition in planning in 2006.

Modular Technology assisted the three owners throughout the design and construction process to insure their needs were met within their budget. Two mirror image footprint buildings were designed around a center courtyard. Play areas for individual age groups were designated behind each building with a large recreation field beyond the courtyard.

The buildings were designed to accommodate and separate the diverse age groups with fencing between and around the buildings to maintain security.

The first building addition included classrooms, computer lab, and office and was located in the corner of the property, taking a portion of the large recreation field. It is visually and physically connected to the other buildings with hardscape. A Science Lab building, which will complete the campus build out, is currently in planning.

As with most of our charter school clients, Benchmark has returned to Modular Technology to expand their facility. Repeat clients are part of our core business. As each facility is designed and built, we are continually working with the client on their present and future success. We see ourselves as their partner in education planning, today and into the future.
