

Building Outside the Box

- 4,700 square feet
- Four month construction schedule
- Energy efficiency package

Wells Fargo Bank
5160 West Baseline Road, Phoenix, Arizona

Modular Technology, in partnership with renowned firm Leo A. Daly as the design architect, has completed over 40 banks in the Southwest for Wells Fargo. Each branch is designed to complement the surrounding retail center while making its own unique architectural statement.

This building's imposing height anchors it to the surrounding retail

center. Desert colors, tones and hues found in the stone accent walls and columns are used throughout the building exterior.

Lattice shade canopies cast shadows adding visual interest during the day. The angled supports on the entry roof have dual purpose: to draw the eye to the building mass and to create interesting shadows on

the interior. The bold color of the standing seam metal roof identifies the building and entry. Massive stone columns complement the entry mass.

Wells Fargo continues to partner with Modular Technology because of our accelerated construction solutions.
